

The image features a close-up, high-contrast photograph of a metal thread, likely from a pipe or fitting. The threads are arranged in a series of V-shaped patterns that recede into the distance, creating a strong sense of depth and perspective. The lighting is dramatic, highlighting the metallic texture and the sharp edges of the threads. In the bottom right corner, there is a logo for 'Superior Performance'. The word 'Superior' is in a bold, blue, sans-serif font, and 'Performance' is in a white, sans-serif font inside a red rectangular box. Below the logo, there is a line of smaller text in white, sans-serif font: 'PREMIUM THREAD INSPECTION | CHROME TUBING CONSULTANT | LASER TALLY SERVICE | RENTAL TOOLS'.

PREMIUM THREAD INSPECTION | CHROME TUBING CONSULTANT | LASER TALLY SERVICE | RENTAL TOOLS

SERVICES

Service Comes First

Superior Performance Inc. is a leader in the premium tubular business. Superior Performance is all about providing quality services and the right tools to get the job done right the first time.

From premium thread inspection and laser tally services to chrome tubing consultation and premium casing and tubing rental tools, Superior Performance can fulfill your tubular needs in the pipe yard or on the job site – onshore and offshore.

Superior Performance's philosophy is to offer guidance on all thread aspects so you can trust in the quality of services performed by our personnel. Our knowledge of rig operations allows us to prevent problems before they turn into downtime at the rig site.

AT THE PIPE YARD

Cleaning and Inspection

An experienced field operator will monitor thread cleaning and the removal of protectors in the pipe yard, in addition to inspecting seals and threads on all premium threaded connections and noting visible pipe body damage. While in the yard, a field operator will also:

- Inspect the metal-to-metal seals on both the pin and box
- Inspect the threads and connection IDs for damage, pitting and corrosion
- Repair damages found on connections, if possible
- Mark non-repairable joints
- Prepare connections and supervise the installation of thread protectors

Ready for the Field

A field operator will monitor the make up of accessories in the yard and ensure all connections are properly prepared for running in the field. A field operator will also make sure all completed assemblies have thread protectors prior to being loaded in tool baskets for shipment.

Our professionals will also supervise bolstering, loading and unloading of tubulars.

AT THE RIG SITE

Our Role as Consultant

At the rig site, our field professionals will meet with your site supervisors and review and inspect:

- All accessories to ensure proper size, weight, grade and thread type
- All pipe to ensure correct size, weight, grade and thread type
- Running order of pipe and accessories
- Handling plugs to ensure proper size and weight
- Stabbing guides and crossovers
- Torque values and maximum capability
- Torque gauge for calibration

IN THE FIELD

Monitoring

When pipe running operations begin, a Superior Performance field specialist will continue to monitor to ensure proper running procedures, proper torque is applied and to ensure proper makeup standards are followed.

After the Job

A Superior Performance field operator will complete a service report after the job to provide a detailed account of the operation and make recommendations for changes to improve future operations.

LASER TALLY SERVICES

Precision Measurement, Accurate Recording

Superior Performance offers laser tally services to ensure precision measurement and accurate recording of tubing, drill pipe and casing, while reducing the time spent measuring lengths of casing and drill pipe.

Superior Performance uses the latest technology to deliver the most accurate measurements with digital precision, while removing human error.

Detailed reports containing key information can be printed or stored and shared electronically.

A Safer Way

Laser tally services eliminate the need for rig personnel to stand on pipe racks to obtain measurements, which make it a much safer solution. In addition, the lasers used by Superior Performance operators are non-hazardous Class II rated and pose no threat to workers.

RENTAL TOOLS

Superior Performance provides quality rental tools in a wide variety of sizes and connections including:

- Casing swages
- Crossovers
- Drifts
- Elevator bails
- Becket with bails
- Handling plugs
- Inside BOPs
- Mud buckets for tubing and drill pipe
- Plug valves
- Pump in subs
- Pup joints
- 500 ton wireline lift frame
- "Quickee" thread protectors
- Safety valves
- Single joint elevators
- Stabbing guides
- Tool baskets
